

Role Setup

The **left column** shows the raw department roles exactly as they appear in the schedule (e.g. *SL SelfScan*, *Cashier Exp*, *Ctr Str Mgmt*).

This list is generated automatically from past schedules and **cannot be edited directly**.

The **right column** is where you assign each raw role a **display role** — the name that will appear in the daysheets.

Employees with the same display role will be grouped together in the output.

For example: by default, *Cashier Exp* and *Service Clerk* are both assigned the display role **Register Team**. This means employees in either role will appear under **Register Team** in the output.

You can also **reorder the list using the arrow buttons**. The order you set here determines the order roles will appear in the daysheet output.
